

How to Overburn a Data CD

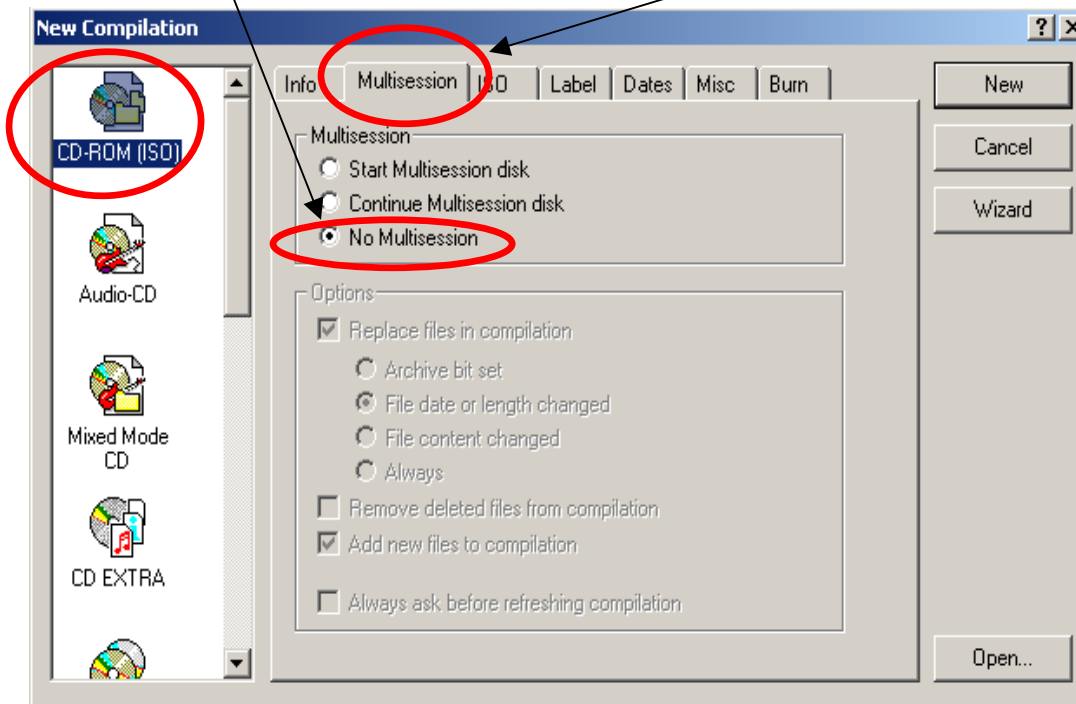

1. To Launch Nero: Click on **Start>Programs>Ahead Nero**, and select **Nero-Burning Rom**.

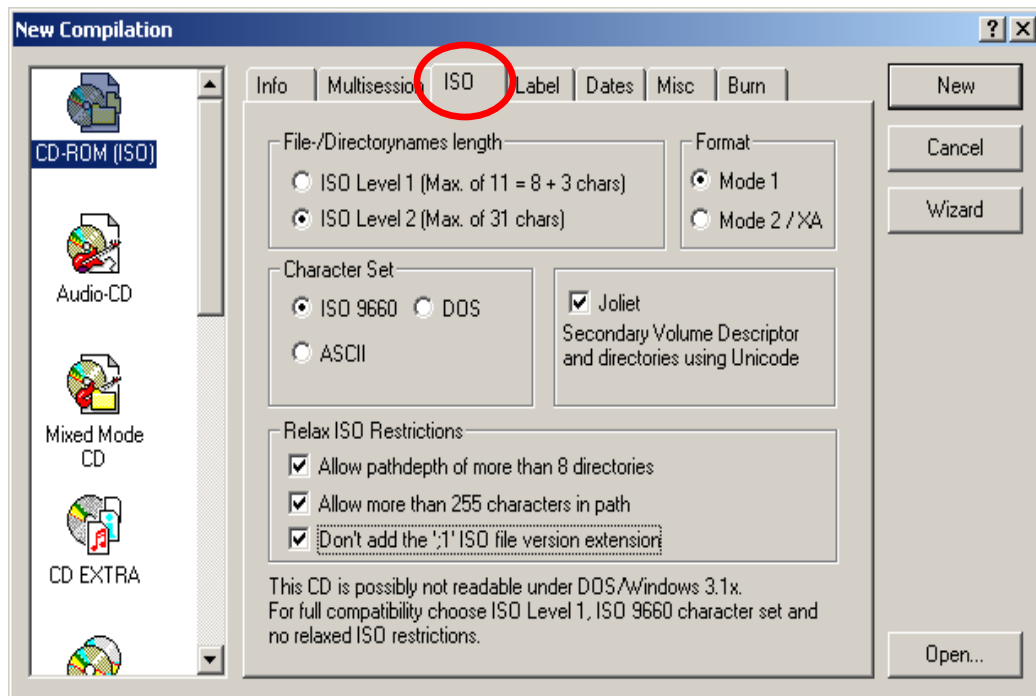

2. If the Nero Wizard opens, close the wizard using the **Close Wizard** button.

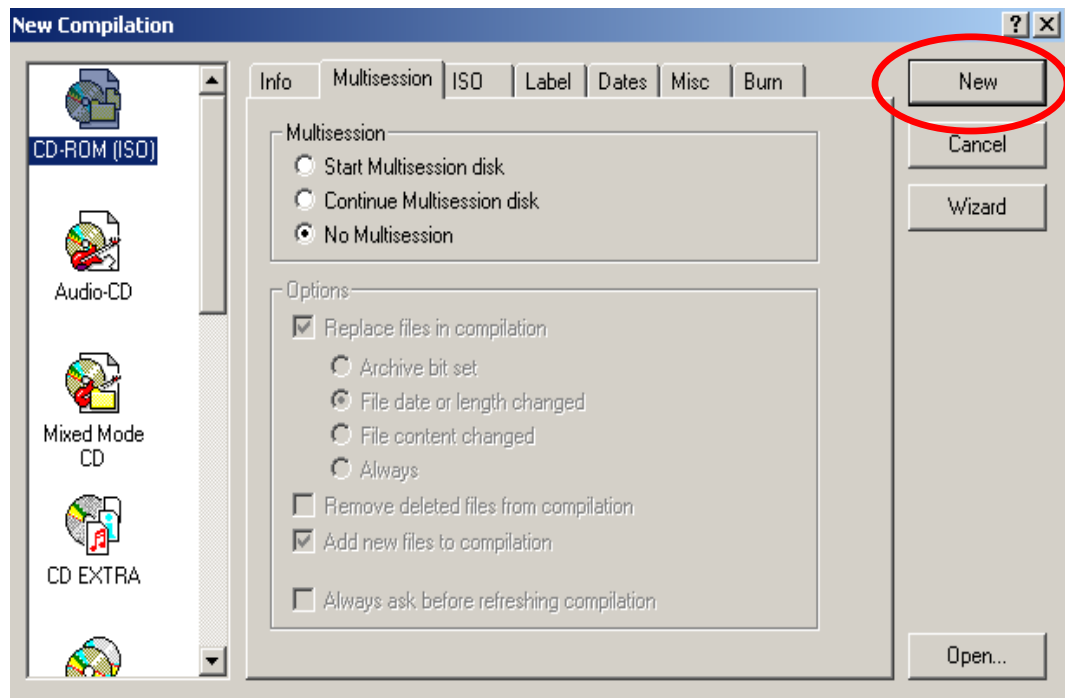

3. In the New Compilation window you will see a list of CD types in the left pane of the window. Highlight the **CD-ROM ISO** icon and go to the **Multisession** Tab and select **No Multisession**.

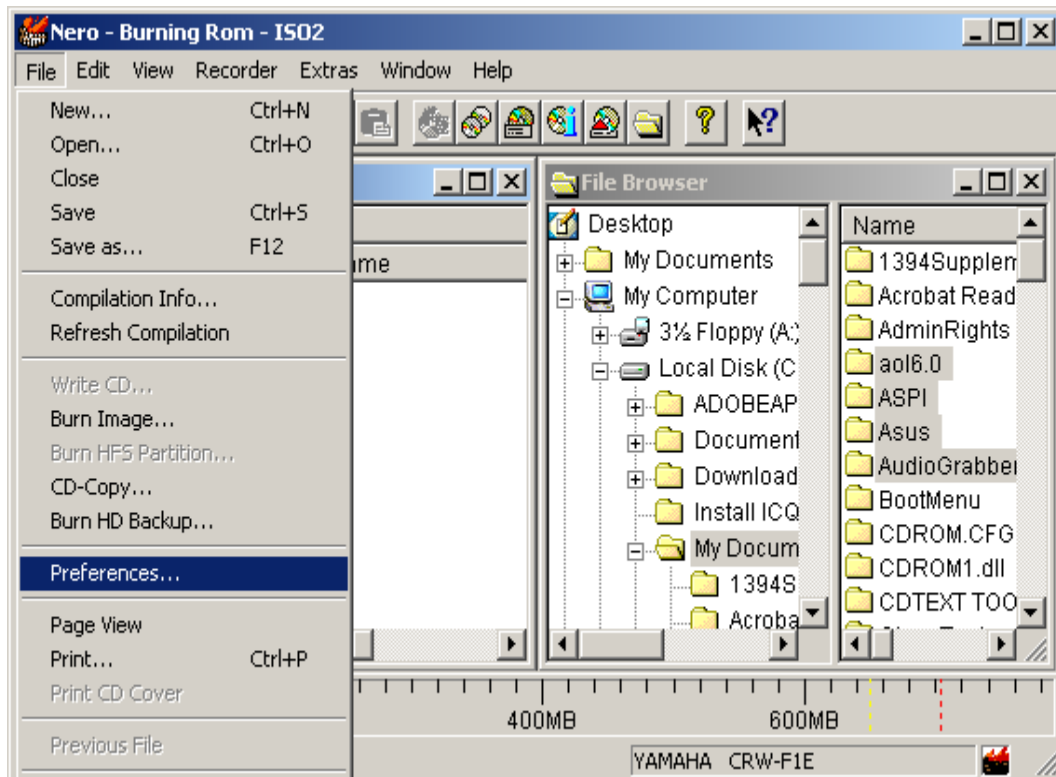

4. Now click on the “ISO” tab to configure for your data files. If you are going to create a CD that will be used on Windows 95/98/ME/2000/XP or NT, use the below settings for best results

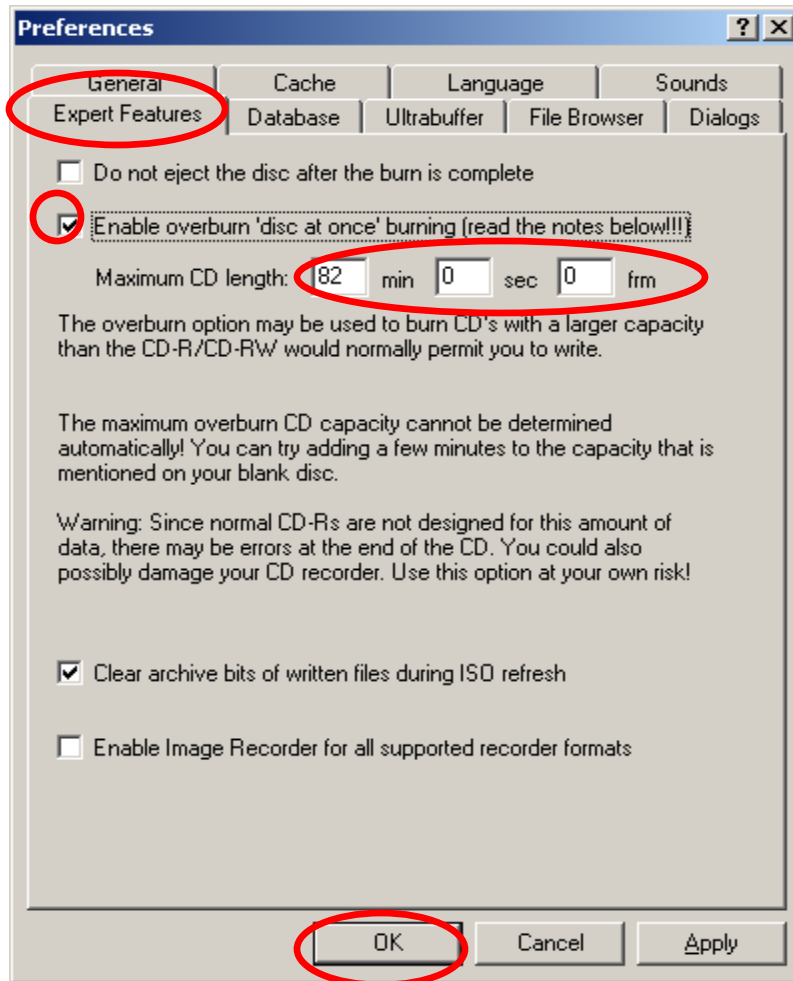

5. After checking your Multisession / ISO properties, click the 'New' button.

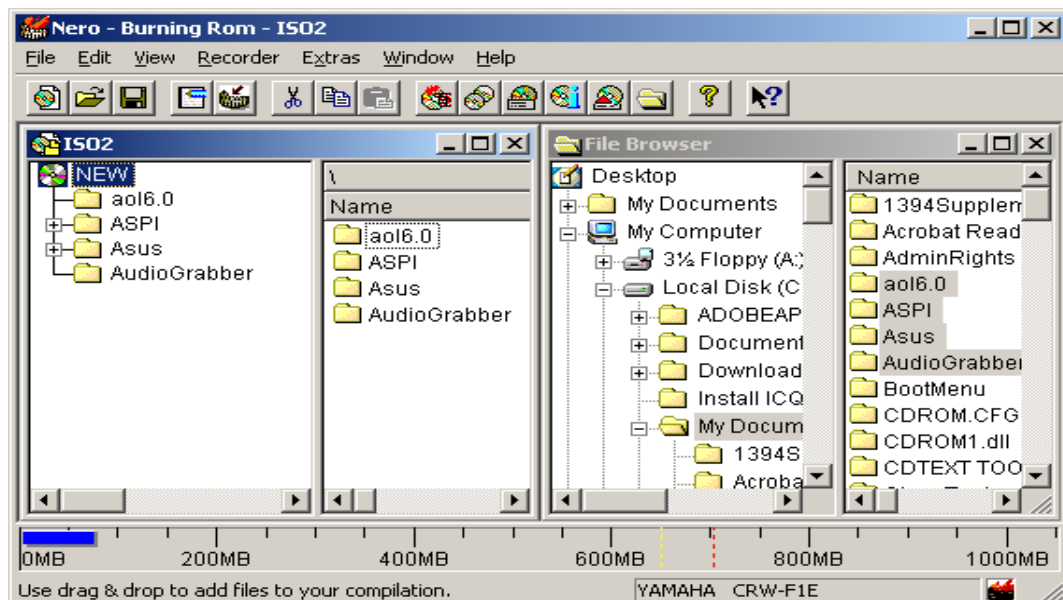

6. This brings up the Nero-Burning Rom – ISO1 window. Go to **File>Preferences**

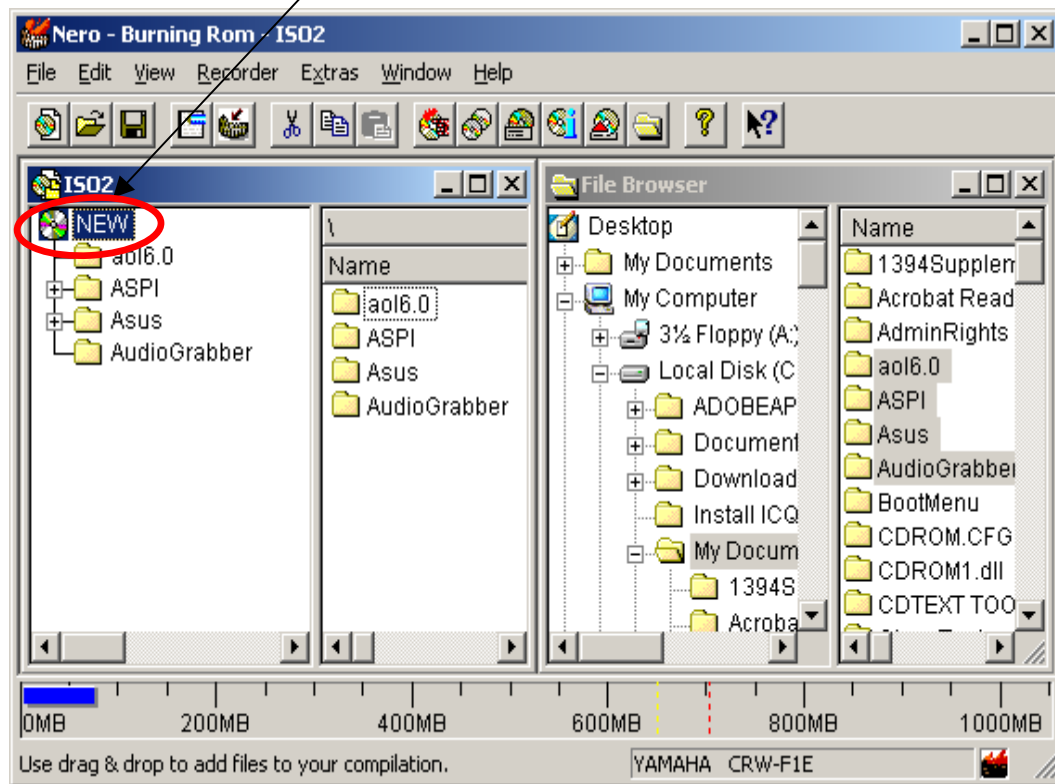

7. Click on **Expert Features**. And then check the option for “**Enable overburn ‘disc at once’ burning**”. Click ‘**OK**’ or ‘**Apply**’ when changes are complete.
- Set the Maximum CD length to: 74min media set to – 76:0:0
80min media set to – 82:0:0
90min media set to – 92:0:0

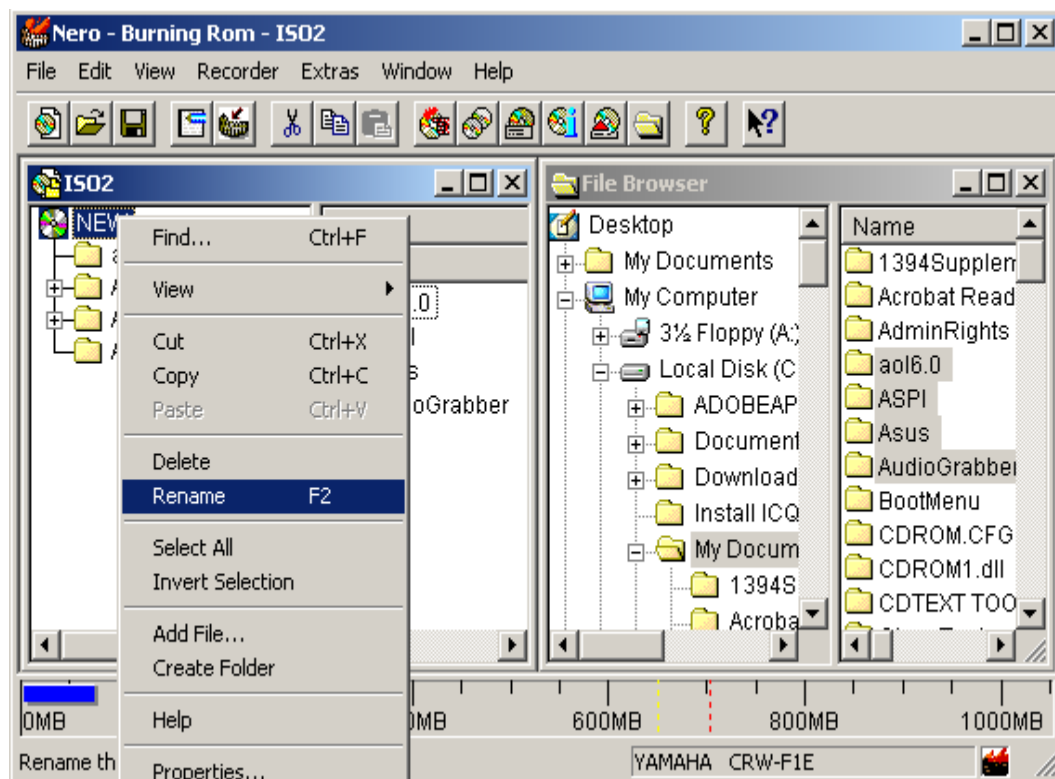

8. Drag and drop your data files from the **File Browser** window (right) to the **ISO1** window (left).

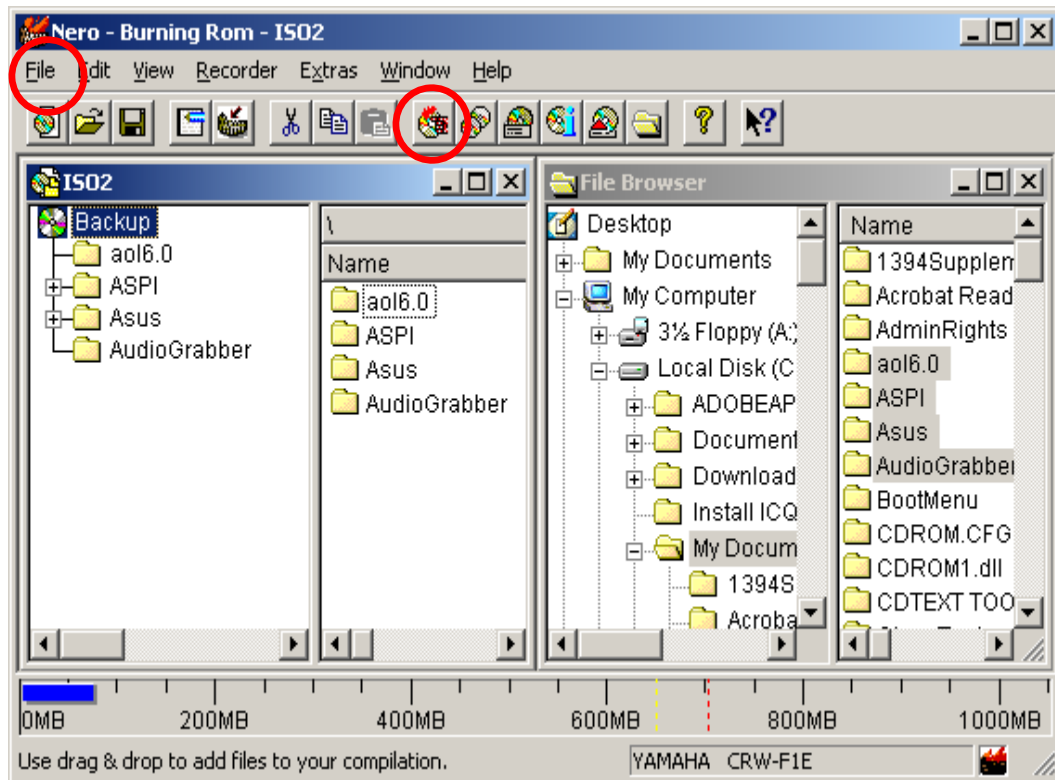

9. Once you have selected your data to write to the CD, you may now wish to give your new CD a Name. By Default, we give it a name of **New**. To give it a new name, right-click on **NEW**.

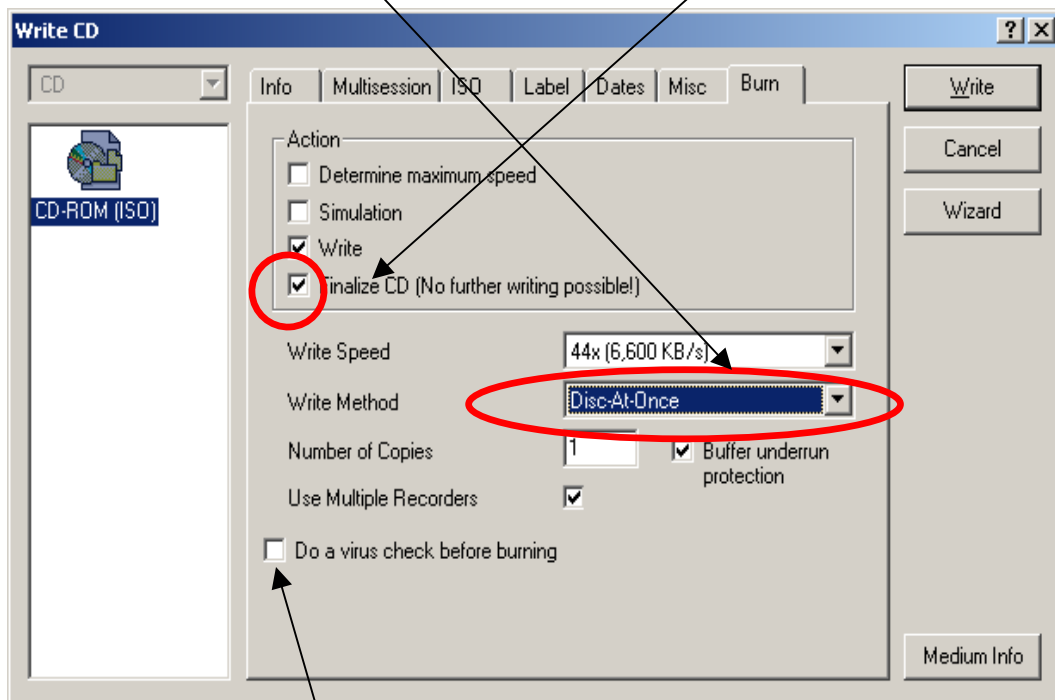

10. Then select “**Rename**” and enter a new name for the CD you are about to create.

11. Click the **Write-CD dialog** button (Ninth icon from the left) **or** go to toolbar, click **File>Write CD**.

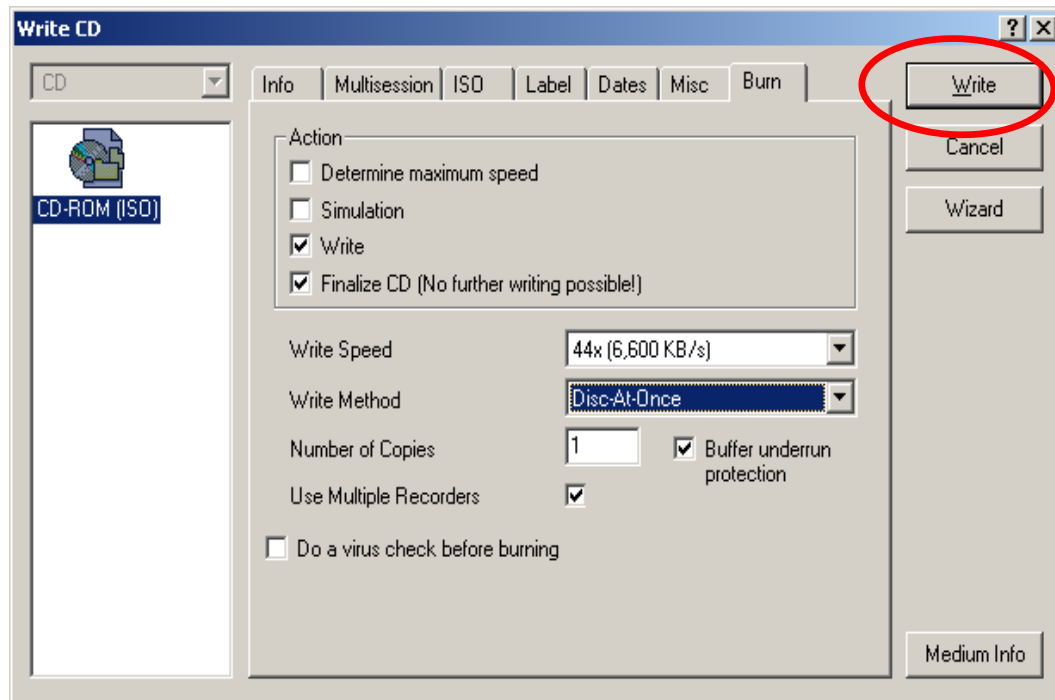

12. The Write CD window opens. Under Action check **Finalize CD** and under Write Method select **Disc-At-Once**.

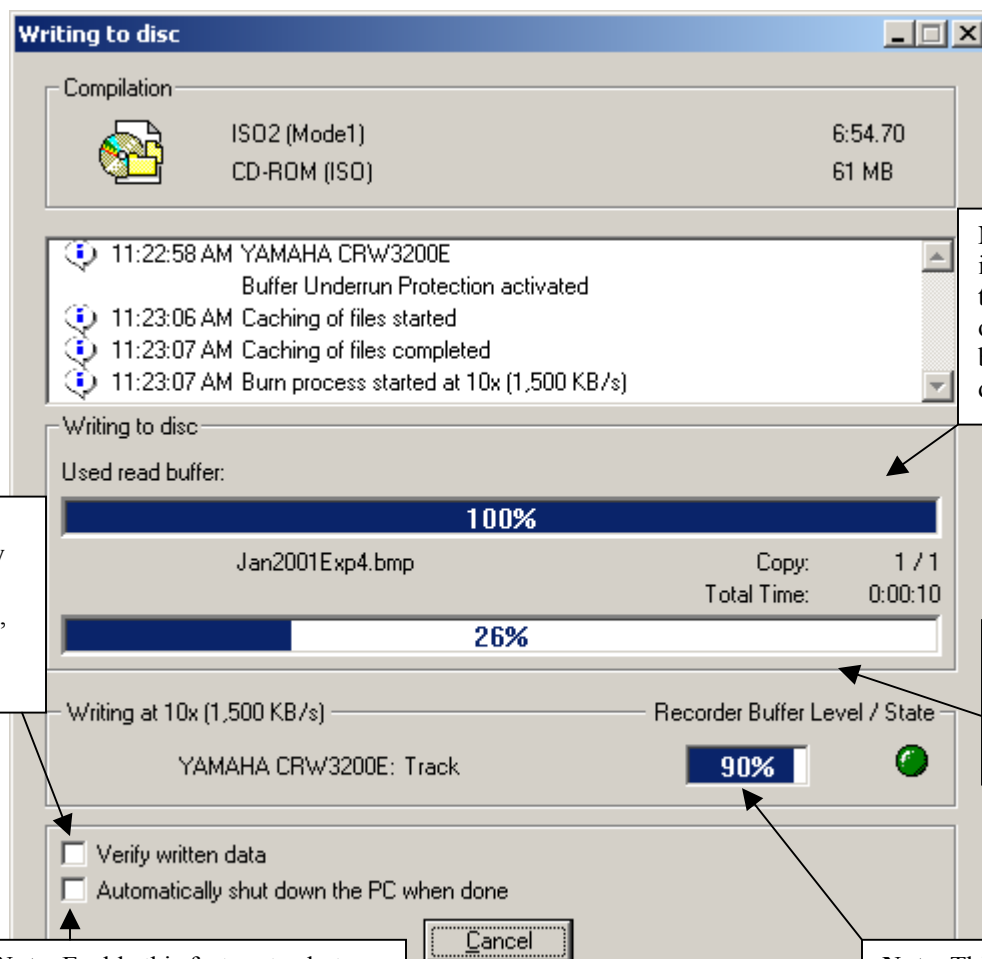

Note: This feature only comes with the Retail version of Nero. And if enabled, will check for viruses for the data you selected to be written to the CD, before the write process begins.

13. After checking Burning properties, click the **Write** button to start the burning process.

14. Nero will begin the burning process.

Note: This is an indicator of your temporary buffer level on your Hard Drive, being used by Nero during the burn.

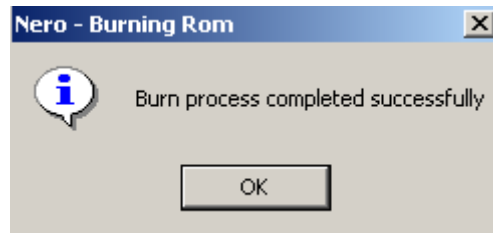

Note: Enable this feature to do a Bit by Bit comparison between your source, and the CD you just created.

Note: This is the progress bar of the actual write process going on.

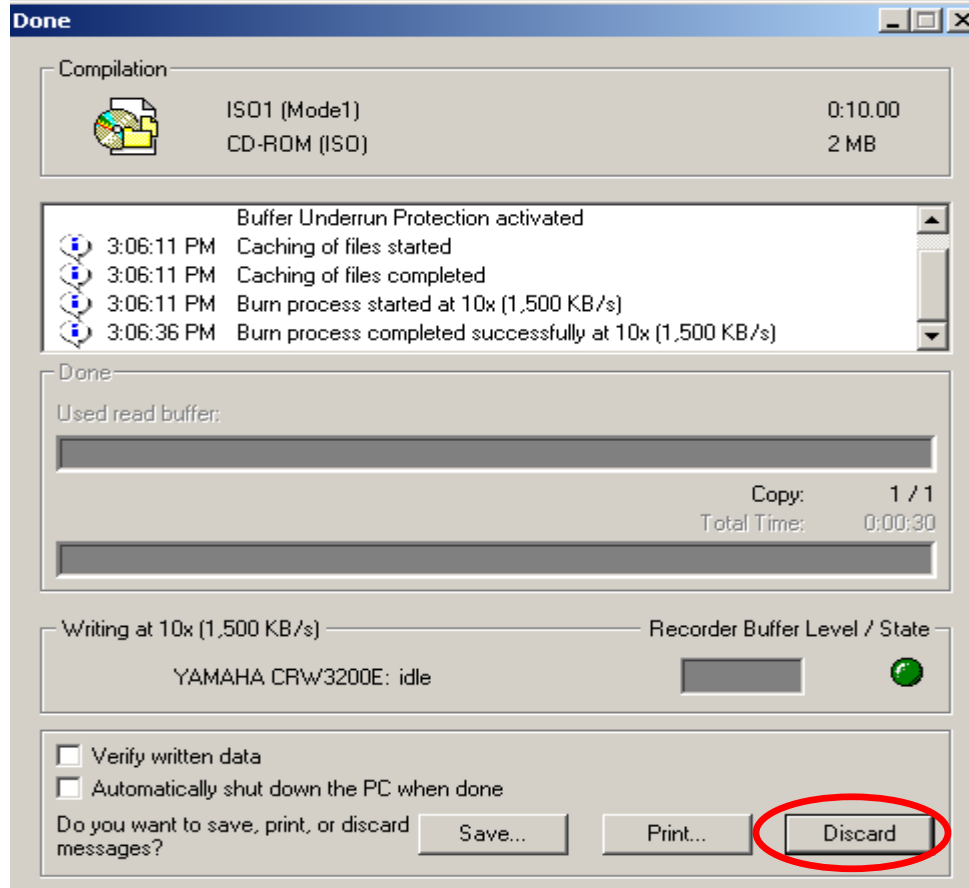

Note: Enable this feature to shut down your computer when the write is complete.

Note: This is an indicator of your buffer level on the Recorder.

15. The next window will indicate that the burning process was completed successfully. Click the **OK** button to continue.

16. Click the **Discard** button if you did not receive any errors during the write.

Note: If you incur an error during the burning process, please click the **Save** button to save the Nero error log. If you are unable to resolve the problem, please e-mail us a brief description of the problem and a copy of the Nero log file. The log will help the Nero Technical Support Team work quickly to address your problem.

17. When you close the Nero Burning Rom window, you will be prompted to save changes to ISO 1. Press **No**, if you have no plans to use that image again.
